Submit

AI-generated content may be incorrect

Start Date and Start Time Default to 4 hours ago UTC

End Date and End Time Default to current UTC time.

Note: Query Data Store contains data for weeks potentially

Search Text:

This parameter provides the most flexibility in finding queries. Beginning and Ending Wildcards are not necessary as that is being added automatically:

Option 1: Enter Table/EntityName to find queries with a specific table in the query

SalesTable

Option 2: Enter MissingIndex to get list of queries that have a missing index hint

MissingIndex

Option 3: Enter Index Scan to get a list of queries that have an Index Scan in the query plan

Index Scan

Option 4: Combine the above(The wildcard is necessary in this case)

SALESTABLE%Missing Index

Option 5: Find 2 tables in the same query

SALESTABLE%SALESLINE

Min Duration:

This parameter helps in finding queries that are running over xxxxx(ms). This helps find those LONG running queries.

For Example:

1000 (greater than 1 second)

Min Executions:

This parameter helps in finding highly active queries. This is to help eliminate the one off user created query (bad search for example)
